Present182 per-class ancestry diagnostics

Metrics calculated separately from each parent's exact query-bp confusion counts

Dots: eight independent VAL parents. Large markers: equal-parent mean. Error bars: sample SD, ddof1.

One completed fit per method. Native ARGMix: 11 epochs; AP: 5 epochs; H045: H042 warmstart +30 passes /960 updates, seed101.

Same present-day query-bp support; different inputs, objectives and selection budgets. No independent TEST or architecture-level attribution.
